Professional Summary

Software Engineer and Computer Science student at UFRGS with practical experience in full-stack engineering, system design, and production environment support. Skilled in C#, .NET, Node.js, React, and TypeScript across web, mobile, backend, and integration services. Experienced in applying Clean Architecture, DDD, and design patterns to build maintainable, scalable, and reliable software. Passionate about solving complex problems, building internal tools, and optimizing operational workflows in enterprise environments.

Professional Experience

Colbiz - Collaborative Business | Software Developer

Dec 2024 - Present

Architected and developed a high-concurrency event-driven integration platform using **C#, Kafka, and React**, implementing custom code blocks execution, automated workflow scheduling, and asynchronous message consumption to prevent concurrency bottlenecks.

Engineered a complete digital solution from scratch, including an optimized web frontend (SEO & indexing), a **React Native** mobile application, and a dedicated **node.js microservice** for Apple/Google Wallet voucher generation using DDD principles.

Maintained and evolved multiple enterprise systems across distinct business domains (travel, financial services, backoffice), consistently applying **Clean Architecture, Onion Architecture, and DDD** to ensure code scalability and decoupling.

Diagnose and resolve production issues, assist with infrastructure setup, and support other developers in debugging issues and thinking through solutions.

Technologies: React | React Native | TypeScript | Node.js | C# | .NET | PostgreSQL | SQL Server | AWS | Kafka

IFSUL - Federal Institute Sul-rio-grandense | Software Developer Intern

May 2023 - Nov 2023

Developed a cloud-based automation script using **Python, BeautifulSoup, and Selenium** to scan and extract 100% of an enterprise application's content, accelerating its internationalization process (English/Spanish).

The solution was executed entirely in the cloud using Replit to bypass local hardware and permission restrictions, ensuring project delivery.

Centralized and structured the extracted textual data automatically into Google Sheets via the **gsread API**, creating a real-time collaborative translation workflow for cross-functional teams.

Technologies: Python | BeautifulSoup | Selenium | Google Sheets | gsread | Replit

Education

UFRGS - Federal University of Rio Grande do Sul

Bachelor of Computer Science | Expected Graduation: 2030

IFSUL - Instituto Federal Sul-rio-grandense

Technical Degree in Mechanical Engineering | 2020 – 2024

Technical Skills

- **Languages:** TypeScript, JavaScript, C#, C, C++, Python, Java, SQL.
 - **Frameworks & Libraries:** React, React Native, Node.js, .NET.
 - **Tools & Databases:** Docker, Git/GitHub, SQL Server, PostgreSQL, Kafka, AWS.
-

Languages

- **English:** Intermediate - Good reading and listening comprehension (currently enhancing speaking skills).
- **Portuguese:** Native speaker.
